Good Beginning to Good Baking

Here's where all the fun begins!

The Basic and Richer Dough recipes below are the basis for most of the recipe ideas in this Baking Book. The doughs can be shaped as you like, or adapted to your own favorite yeast bread recipes.

You'll find working with Pillsbury Hot Roll Mix a real joy. And each of the exciting good things you create from it will add to your fame.

FOR BASIC DOUGH . . . Place 1 cup warm (not hot) **water** in warm mixing bowl. (Too hot water kills yeast. Too cool water slows its action.) Sprinkle **yeast** over water; stir to dissolve.

FOR RICHER DOUGH . . . Place $\frac{3}{4}$ cup warm **water** in warm mixing bowl. Sprinkle **yeast** over water; stir to dissolve. Blend in 1 unbeaten **egg**.

1. Add Hot Roll Mix immediately. Stir thoroughly. Cover with waxed paper or dry towel.
2. Place in warm place (85° to 90°F.). To maintain steady warmth:
 - a. Set pan of hot water on bottom of unheated oven. Place dough on rack above. Keep water hot and door closed. (If your oven has a pilot light, keep door open.) or
 - b. Place dough in spot where there is some heat from radiator or range, but not in a draft. Do not place directly over pilot light or on top of hot oven. Too high temperatures will kill yeast.
3. Let rise until dough is light and doubled in size. An indentation should remain when finger is pressed into dough. It takes 30 to 60 minutes for dough to rise to proper lightness.
4. Flatten dough on lightly floured surface. Fold over on itself 5 or 6 times, pressing down firmly each time. Dough may be kneaded if you wish. Shape and bake as directed in recipe.

Tips for Making Your Yeast Baking Perfect

These handy tips will help make your yeast baking easier and give you results you can be proud of.

YEAST . . . Yeast is a living plant. Too much heat can kill its action; not enough heat can slow down its action. For best results, dissolve yeast from Pillsbury Hot Roll Mix in warm (not hot) water. To test the temperature of the water, drop a little water on the inside of your wrist. Warm, not hot, water feels comfortably warm.

KNEADING . . . "Working" yeast dough helps to make finer-textured rolls and bread and also makes a soft, moist dough easier to handle. The dough should be turned out on a floured surface and folded over on itself 12 or 15 times, pressing down firmly each time. When you make loaves of bread, additional kneading is necessary to develop the gluten structure for fine, even-textured well-shaped loaves. To knead, fold dough over on itself and push with palms of hands. Repeat this process rhythmically, turning dough one-quarter way around on the board each time. The dough will feel satiny and smooth when it has been kneaded sufficiently.

SHAPING . . . Dough which is ready for shaping is very easy to handle but may be slightly sticky. Small amounts of flour may be used on the board or pastry cloth for shaping. Shape the dough as desired following our easy recipe directions.

SHAPING A LOAF OF BREAD . . . To shape a loaf of bread, roll out dough to a 12x7-inch rectangle. Roll up tightly, starting with 7-inch side. Roll toward you, jelly-roll fashion, sealing dough with heels of hands after each roll. Seal edge and ends.

READY TO BAKE . . . When shaped doughs are puffy and light and have doubled in size, they are ready to bake. Dough shaped for bread is ready to bake when the center of the loaf is slightly rounded above the edge of the pan.

OVEN TIPS . . . Approximately 15 minutes before the end of the second rising, set the oven at the temperature you will be using. Be sure that the pans are as near the center of the oven as possible. An oven thermometer is helpful in checking the exact temperature of the oven.

TEST FOR DONENESS . . . Rolls, coffee cakes and breads should be baked until they are a beautiful golden brown. Bread may be tested by lightly tapping the bottom or sides of the loaf for a hollow sound.

CRUST . . . For good flavor and a nice shiny crust, brush hot rolls and breads with soft butter while still warm if they are not to be glazed.

TO COOL AND STORE . . . Yeast breads and rolls should be removed from baking pans immediately after removal from the oven, and placed on wire racks to cool. Loaf breads should be completely cooled before slicing. Wrap yeast breads in waxed paper or foil before storing in a well-ventilated bread box.

TO REHEAT . . . Rolls or coffee cakes may be sealed tightly in aluminum foil and placed in a slow oven (325°) until heated through. Or, place in a damp paper bag and heat in a slow oven until the bag is dry.

Good Home Baking from Your Freezer

This is the new take-life-easy way to have a wonderful variety of yeast breads *any* time! You do your baking in your spare moments. On not-so-busy afternoons, or when the youngsters are in school. Baking ahead and freezing gives you more Sunday leisure . . . more carefree weekends with your family . . . more time to spend with your guests . . . more chances to add your own special touches and frills.

Try this new take-life-easy idea. Nearly all the good things in this new baking book can be baked ahead—then frozen for serving later.

WHAT CAN I FREEZE? Most of the recipes in this book make foods you can freeze for varying lengths of time . . .

Breads, Dinner Rolls, Sweet Rolls, Coffee Cakes and Cookies . . . may be frozen successfully up to a period of 3 months.

Doughnuts . . . may be frozen, but not longer than 3 weeks for best results.

Pizza and Snack Bread . . . freezing not recommended for these short-cut foods.

REMEMBER! Freezing does not improve food, it only preserves the original quality. If properly packaged and not stored too long, a product which was light and tender when placed in the freezer will be light and tender on removal from the freezer.

GLAZES, icings or frostings with confectioners' sugar should not be frozen. They go on after thawing (or after reheating). Use fillings, butter glazes, chopped nut garnishes just the way the recipe says; they freeze well.

FREEZING unbaked rolls is unpredictable since the dough may lose some of its rising capacity. We recommend freezing the baked product rather than the dough.

HOW DO I WRAP FOR FREEZING? Remove the baked breads from pans to cool completely. Wrap immediately in meal-size or party-size amounts, and freeze. Pack several kinds together for variety. Because breads stale quickly right after baking, wrap and freeze just as soon as they're *thoroughly cool*.

Is the wrapper moisture-proof? Strong? Clean? Odorless? Tasteless? Easy to label? Ask yourself these questions when you are selecting a wrapping material. We like heavy-duty aluminum foil, plastic-coated freezer paper and plastic film.

The secret of keeping that fresh-baked flavor is to wrap correctly. To keep fragile breads like tea rings or pan rolls protected, place each one on a foil-covered cardboard or paper pie plate; then wrap.

A "druggist's wrap" is a good, tight wrap. Here's how you make it: Place the bread in the center of the paper. Bring the two longest sides of the paper together on top of the bread and fold these edges over about an inch. Fold over and over (only two folds are necessary) until the paper is tight and flat against the top of the bread. Turn over the package; fold the end corners toward each other. Then fold the ends over and stretch tight.

Aluminum foil seals itself. A strip of freezer or masking tape which comes in various colors is good for a label. For plastic-coated freezer paper, use tape to seal and label.

Plastic bags are also very suitable for use in freezing. They are especially handy for packaging rolls and cookies. Tuck a label inside . . . seal by twisting the top and tying with soft twine or a rubber band.

Labeling all packages to be frozen will help to keep your freezer organized and not just a catch-all. A label should tell the recipe name and the date you baked it. Freeze the wrapped and labeled foods as soon as possible after baking!

HOW DO I THAW AND REHEAT BAKED GOODS? You may thaw breads in their original wrappers at room temperature. Allow 1 to 3 hours with the package on a rack for good air circulation. To thaw and reheat in one step, place aluminum foil wrapped breads in a 300° oven allowing 25 minutes for loaves and rolls, and 30 to 40 minutes for coffee cakes. Always unwrap breads just before serving.

WHAT IF I DON'T OWN A FREEZER? Breads will keep fresh for several days wrapped "druggist's wrap" in aluminum foil. Or, wrap tightly with waxed paper, or place in a plastic bag. The best storage spot is a well-ventilated bread box. Remember that bread stales faster in a refrigerator than at room temperature.

What are "Batter Breads"?

Batter breads are the quickest, easiest of all yeast-type coffee cakes to make. They call for more liquid, so they're really batters rather than doughs. They're slightly richer, are mixed more quickly and require no kneading, no shaping. After blending, you simply spoon or pour the batter right into your baking pan. Let them rise high and light, then bake and serve warm and fragrant right from your oven!

You give these pretty batters or "spoon-and-bake" coffee cakes their fancy-dress touches in simple *new* ways. The following recipes tell just how to do it.

FRY at 375° for 2 to 3 minutes.

Let rise in warm place until light and doubled in size, 30 to 45 minutes.

Bismarcks

What a treat to bite into the crusty brown balls and find jelly. Try jam in some, marmalade in others. Sprinkled with sugar or glazed—they're scrumptious!

Cut rolled-out dough into rounds with a 2½-inch cutter. Place on floured baking sheets and let rise. Fry as for Raised Doughnuts; drain. When cool, cut a deep slit in the side of each; spoon a heaping teaspoonful of **jam**, **jelly** or **preserves** into center. Brush with Glaze. Makes 18.

Baking yeast breads for two used to be impossible, because recipes were for larger amounts and took so long. Two people can't eat six loaves of bread—and certainly you don't want to spend six hours making bread! Pillsbury Hot Roll Mix solves both problems. It makes just the right amount, and takes only a little spare time. Here are some of our yeast-breads-for-two ideas. Soon you'll have ideas of your own.

The recipes which follow will start you off. From half the dough (page 1) make a small coffee cake. From the rest, make rolls for dinner. No chance of getting tired of one bread when you've made "just enough for two".

We've also included new recipes that help you use up some of the usual left-overs. For example, that half-cup of mashed potatoes goes into Hi-Light Potato Rolls (page 16). Savory Onion Loaves (page 7) uses half a package of onion soup mix, and even makes a little loaf to surprise your neighbor. Sunny Apricot Coffee Cake will finish the last smidgen of apricot preserves.

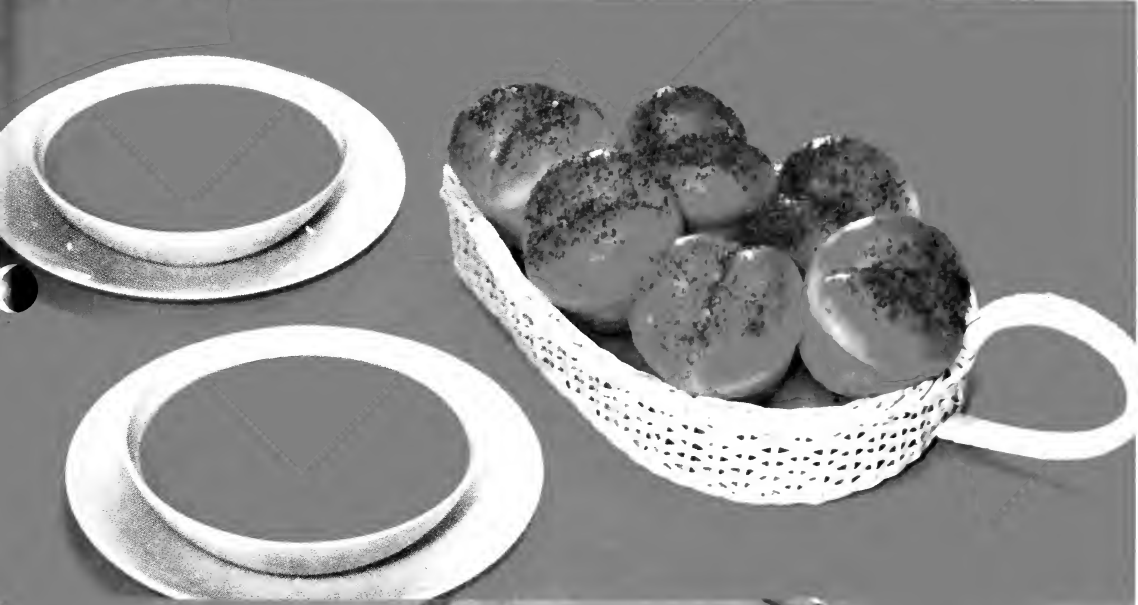

To start your experimenting, here are some of the ways we have tailor-made these recipes just for two. Make a small Filled Tea Ring, using half the dough (and half the recipe for Filling). Use the other half of the dough for Cloverleaf Rolls. Or, half the dough will make one pan of Tiny Pan Rolls for company dinner, plus enough Kolacky for breakfast for two.

Butter-Nut Party Loaf (just half the dough) is our favorite for Sunday brunch. A small pan of Cinnamon Rolls from the other half makes Sunday night supper quite special!

If you have a freezer, you're lucky! Nearly all the good things in this book can be wrapped and frozen in servings sufficient for two. Just follow the hints for freezing on page 3.

Reheating a few dinner rolls or two or three servings of coffee cake is very easy. Wrap air-tight in aluminum foil, place in a slow oven (325°) for about 15 minutes. Or, follow the directions with your electric skillet.

For a 12x10-inch rectangle—about 1 cup sauce

For a 14-inch round pizza—about 1 cup sauce

For a 9 or 10-inch piepan—about $\frac{1}{3}$ cup sauce

Pizza Party

Pizza for a Party

Serving Pizza is a superb way to add variety to family meals. But Pizza has become a party-time favorite, too—especially since Ann Pillsbury planned the help-yourself Pizza Party that's the talk of the town! Just see how pretty your buffet table can look. And how much fun for each guest to create his own masterpiece of a pizza . . . made plain and simple or Dagwood style . . . but certainly individual!

The big round traditional pizzas are fun to serve. One package of Hot Roll Mix will make two large 14-inch pizzas. But if you don't have these large size pizza pans, there's a choice of other pans. For a party, we like to use the 9-inch foil piepans because they eliminate dishwashing. The size is just right for individual party pizzas—but extra hungry guests might eat two!

For family supper-size pizzas, try your regular 9-inch piepans. These are the ideal size for individual serving, and one package of Hot Roll Mix makes four crusts.

For snack-time pizza, you can't beat pizza prepared on baking sheets. One package of Hot Roll Mix will make two 12x10-inch pizzas. After baking, cut the two rectangular pizzas into small strips with a scissors. They're bite-size and easy to handle . . . and you'll have enough tidbits for 6 to 10 guests.

Preparing pizza ahead of time. Preparing and refrigerating pizza dough ahead of time is a great convenience for the pizza party hostess. The morning of the party, make up Hot Roll dough, pat it into the pans, and it's all ready. No rising is necessary! Brush dough crusts with cooking oil, and stack them. Carefully wrap each stack in foil—sealing to make it airtight—then store in the refrigerator until party time. The rest of the day is then free for setting the table, preparing the cheeses, toppings and sauces. The dough-crusts stay perfect in the refrigerator until time to use.

If you are planning to have more than one kind of sauce for your pizza party, these proportions will be helpful to follow:

Sauce	Number of cups	Sufficient for:
Real Italian Sauce	1½	6 9-inch foil pans
Barbecue Sauce	2¾	8 to 10 9-inch foil pans
Sour Cream Sauce	1¾	6 9-inch foil pans

Next, how much cheese should you provide for your Pizza Party? Here's a simple way to figure your needs. For each package of Hot Roll Mix, allow one-half pound of Provolone, Mozzarella, Cheddar or American cheese, plus one-fourth cup grated Parmesan.

If you are having six guests for a "help-yourself" Pizza Party, we suggest two 3-oz. packages of Parmesan cheese, two kinds of soft cheese—½ lb. white Italian and ½ lb. Cheddar, perhaps, to slice or shred.

For your toppings, the following amounts will serve six guests: button mushrooms, three 4-ounce cans; anchovies, 1 can; pork sausage, 1 lb. fried as tiny meatballs or browned and crumbled; wieners, ½ lb.; pepperoni, 1 cup sliced (½ lb.).

SNACKS and APPETIZERS
